

OCEAN WAY® AUDIO AeroWave™

GLL Data Files

Thank you for downloading the GLL data files for Ocean Way Audio's AeroWave™ loudspeakers, which offer high-fidelity constant coverage in both vertical and horizontal planes.

Using Ocean Way Audio's decades of experience and development of high-fidelity studio monitors, AeroWave™ was designed to bring studio-quality sound to live venues by minimizing reverberation and interference. The result is true stereo imaging across the entire audience.

The sub bass system that accompanies AeroWave™ is also unique, in that it goes exceptionally low - but with the definition and tight punch that is often lacking in most live sound venues.

The enclosed GLL files are compatible with **EASE** and **EASE Focus 3**

For support with EASE software, please click [here](#).
